

Fractured Carbonates

20 years International experience throughout hydrocarbon value chain, from data acquisition and logging through to inclusion of fractures in reservoir models and well operations.

We can work **any size of project** from collating the available data and providing direction/advice to a full characterisation study resulting in conceptual models and input to dynamic simulation.

- Data Acquisition
- Structural Core Logging
- Integration of Static and Dynamic Data
- Conceptual Models
- Conductive Direction/Stress Model
- Input to Dynamic Simulation
